Please DOUBLE-BAG all Asbestos samples in zipped bags. EMSL can provide sampling bags upon request.

a) Due to magnification limitations inherent in Asbestos by Polarized Light Microscopy (PLM), asbestos fibers in dimensions below the resolution capability may not be detected. The limit of detection as stated in the method is 1%.Please refer to the EPA for more information regarding asbestos in your home: https://bit.ly/3NbgqDQ. You can also visit EMSL's Asbestos in Homes website at https://asbestostestinglab.com.

b) New York State: Samples are analyzed first via Method 198.6 by PLM. If results are <1% or Inconclusive, samples are then required to be analyzed by Method 198.4 by TEM. You may see two results on your report. All ceiling tiles sampled in NY State are required to be analyzed by both NYS ELAP 198.6 and NYS ELAP 198.4

c) Please check with your lab as Vermiculite may have local requirements such as NY state where loose fill vermiculite is considered to be asbestos containing and surfacing materials containing vermiculite may require further analysis.

Comments:		

EMSL Analytical, Inc.'s services are limited to testing samples and reporting results.. We analyze samples by various methods and provide a written report. EMSL *does not* provide written or verbal advice on how to interpret results or how to proceed after you receive results. For assistance with interpretation, you may call your local health department, visit the USEPA website at www.epa.org, or hire an environmental consultant.

Sample results will not be released until payment is received in full. If you do not wish to use a credit card, include a certified check or money order in the amount that corresponds to the turnaround time you requested, multiplied by the number of samples you submit.

Not all services and/or tests are offered at every EMSL laboratory location. Please contact your local EMSL laboratory to confirm their ability to provide the service/test you require.
